

## Miracle Mile Water Quality Assurance Revolving Fund Site January 2006

### SITE DESCRIPTION

The Arizona Department of Environmental Quality (ADEQ) is investigating groundwater and soil contamination at the Miracle Mile Water Quality Assurance Revolving Fund (WQARF) Site. The ADEQ WQARF program, which is also known as state Superfund, investigates and cleans up contaminated groundwater and soil sites throughout the state.

The Miracle Mile WQARF Site is located in west Tucson, and is bounded approximately by Wetmore Road to the north, Flowing Wells Road to the east, Prince Road to the south, and La Cholla Boulevard to the west.

Groundwater at the site is contaminated with trichloroethene (TCE) and chromium occurring over regulatory limits. Depth to groundwater is about 70 feet below ground surface (bgs) in the perched aquifer, and about 160 feet bgs in the regional aquifer.

### SITE HISTORY

In the fall of 1983, the drinking water supply well at the Tra-Tel Tucson R.V. Park, located to the southwest of the present Miracle Mile WQARF Site, was found to be contaminated with PCE. Initial investigations focused on defining conditions within the site. These activities included soil and groundwater sampling, identification of facilities in the area of contamination, and distribution of survey questionnaires to these facilities.

Several monitor wells have been installed to investigate the contamination in and around the Miracle Mile WQARF site.

Subsequent investigations included facility inspections, facility record searches, reissuing of questionnaires, installation of monitor wells, and continuing groundwater sampling and monitoring.

The Miracle Mile site was placed on the WQARF Registry in September 1998.

### SITE INVESTIGATION/CLEANUP ACTION

In August 1995, ADEQ abandoned two private wells in the Miracle Mile area. A perched aquifer contaminated with volatile organic compounds (VOCs) was present in both wells. Water from this perched aquifer was cascading through the well bores and potentially contributing to the contamination of the deeper regional aquifer. Quarterly groundwater sampling and monthly water level measurements began in May 1999.

Soil extracted during drilling is closely examined and analyzed to provide information about the hydrology and geology of the site.

In 2001, in response to a request for an interim remedial action from Flowing Wells Irrigation District (FWID), ADEQ re-equipped one of their production wells (FWID-72) and constructed surface storage facilities after completion of a water supply study to identify and evaluate alternate water supplies.

In Summer 2002, ADEQ abandoned the inactive Fairfax Industrial Park industrial production well to prevent potential cross-contamination between the contaminated perched aquifer and the underlying regional aquifer.

ADEQ is currently conducting the Remedial Investigation (RI) as part of the WQARF remediation process. The RI helps to determine what contaminants are present at the site, the extent of the contamination, and potential sources of the contamination. The Draft RI is expected to be completed by July 2006. Following the RI will be a Feasibility Study, which will identify and assess remedial options.

## HEALTH/WATER QUALITY

The Arizona Department of Health Services completed a Draft Baseline Human Health Risk Assessment in January 1995 of the Miracle Mile site. No significant health risks associated with this site were identified at that time.

There are potential risks associated with exposure to VOCs, principally through drinking contaminated groundwater. No one is known to be drinking contaminated water at this site; therefore, no one is known to be exposed or at risk of exposure to these contaminants. Cleanup activities are important to ensure the quality of future drinking water supplies.

ADEQ is working to protect groundwater served by the Flowing Wells Irrigation District.

## FOR MORE INFORMATION:

A Community Advisory Board (CAB) for the site was established in November 1999, and holds public meetings approximately four times a year. The purpose of the CAB is to advise ADEQ, the public and other interested parties about the issues and concerns of the community related to the investigation and cleanup of a WQARF site. The CAB consists of a diversified cross-section of the community, including residents, water providers, and other interested groups.

### Technical Information:

Tina Le Page  
ADEQ Project Manager
